Conservation Elastic Mooring Systems

For anchoring docks, yachts, floating solar

Mina Al Arab Marina, UAE

The Hazelett Elastic Mooring Solution is environmentally friendly, safe and simple.

“Hazelett Marine was easy to work with, delivery was fast and product was cheaper than competitive products. While our dock was inland, it survived Hurricane Florence because of Hazelett elastics.”

-Steven Bailey, North Carolina Wildlife Resources Commission

STABILITY

Hazelett elastics absorb energy and reduce peak forces by 30 – 80%. Constantly in tension, the violent jerking motion of chains is eliminated and the docks are more stable and are easier to walk on in rough weather.

LONGEVITY

The elasticity of the system minimizes forces and stress on dock connection points, increasing the life of the dock. Hazelett elastics have a 30 year design life and include UV inhibitors to protect from sunlight.

SIMPLICITY

The Hazelett elastic is a homogenous, proprietary technology made in the USA that is resistant to biofouling and abrasion. The system greatly reduces, if not fully eliminates, metal-to-metal connections prone to rust and wear.

ENVIRONMENTAL CONSERVATION

The Hazelett elastic mooring system, connected to a Helix or earth anchor, floats above the seabed with a minimal environmental footprint. We are proud to be an industry leader in sustainable marina development.

CUSTOMER SUPPORT

Hazelett Marine prides itself in being a solution-centric company that works closely with its customers from the beginning design phase to aiding in the installation process. We are here for you every step of the way.
